NOTE : All surface variations have brushed satin finishes except Matte Black

**MATERIALS:**

The product material is **STAINLESS STEEL Type-304** with satin (brushed) - finish. The body thickness of the dispenser is 0.6mm. The wall bracket thickness is 1.00mm.

**OPERATION:**

The dispenser distributes single - or half-fold paper toilet seat covers through the beveled opening. It is refilled from the bottom through a concealed opening. The dispenser's capacity should be 250 toilet seat covers or one box.

**INSTALLATION:**

To mount the unit, use sheet metal screws (provided by the manufacturer) on points indicated by "S," either on the wall or the toilet partition. If the wall is plaster or drywall, ensure there is concealed backing in compliance with local building codes and make sure the unit is secured with flat-head screws (not provided). For other wall surfaces, use fiber plugs or expansion shields (not provided) with screws.

Note: Leave a minimum gap of 5" (125mm) from the bottom of the dispenser to the top of any horizontal protrusion to allow enough space for filling the dispenser from the bottom.

**SPECIFICATION:**

The surface-mounted toilet seat cover dispenser is made of type-304 stainless steel and is constructed with partially welded joints using 0.6mm stainless steel. The dispenser is equipped with a concealed opening for bottom refilling. Its capacity can hold 250 toilet seat covers or one box.

The edges of the paper dispenser are bent and smoothed using a special manufacturing method to eliminate sharpness.
